

Digital safety and technological usage tips for parents community

Nabila Alhayek

Digital safety, frequently referred to as internet safety, media safety, online safety or cyber safety encompasses many things. At the core of digital safety is protecting ourselves, our families and others as we connect through digital devices. Digital safety can help you to prevent your school going children from being exposed to unwanted information, materials, or risks on the internet that might harm them, their devices and misuse of personal information. It's smart to teach children computer safety so that they don't fall victim to some common dangers of the internet, and here are some of the helpful tips for safely use of the internet:

**Why internet safety is
important for our
children?**

01

Lead by example

Just like anything, children copy their parents' actions and behavior. If you set boundaries for your own screen, it will be easier for your kids to do the same.

02

**Ask your child to show you the sites
they use**

Show an interest, take note of the sites your children visit and re-visit them later when you are alone. Find out how to set the safety features and how to report any issues directly to the site.

03

Ask your child to set profile settings to private

Since children use social media sites to share just about everything they do, setting their profile to private can help protect them against photos, personal information or even location in the real world ending up in the wrong hands.

04

Set boundaries with your kids

Get them involved in the process of setting age appropriate limits on how long they can spend online, at what times and on which platforms.

05

**Ask your child to tell you if they are worried
about something online**

By talking to your child about the internet, their favourite sites and the risks they may encounter, they are more likely to turn to you if they get into situations online where they don't feel comfortable or see something they don't want to see.

06

Avoid using screen time as a reward

This will elevate the status of screen time above other activities and like using food as a reward may encourage children to simply want more.

07

**Physical activity & sleep are really
important**

Make sure screens are not displacing these things by keeping screens out of bedrooms at bed time and that you are creating opportunities for your children to be active each day.

08

Be aware of age restrictions

Many popular sites (YouTube, Instagram, etc.) have age restrictions. Don't allow your child to sign up for sites if they're underage or not ready.

9

**Help your child to think critically when they're
online**

Remind your child that not everything you read or see on the web is true, and not everyone online tells the truth. More than ever, internet users are required to wade through a lot of noise, distractions, and opinions that flow freely online. Children need guidance to learn this skill.

10

Be careful what they post

The more information you post, the easier it may be for a hacker or someone else to use that information to steal your identity, access your data, or commit other crimes such as stalking.

Tools That Can Help You Make The Internet a Safer Place For Your Children

**Helpful
Tips**

**Make sure your
router has a
decent firewall**

**Install Decent
Antivirus
Software**

**Keep Your Computer
Up to Date!**

**Keep Your
Password Safe and
Hard to Guess.**

**Use a Decent Web
Browser**

**Don't Trust Public
Wifi**

Safe Browsers and Search Sites

Kid-friendly search with suitable results, some exceptions.

<http://www.kiddle.com>

Student search engine gives kids credible, relevant results.

<http://www.sweetsearch.com>

Google scores with scholarly search engine.

<https://scholar.google.com>

Organized guide to educational info on the Web.
